Secretary to Government, N. W. P.

Saharanpore, 12th March 1854.

SIR,

I have the honor to transmit for the information of the Hon'ble the Lieutenant Governor—

A. Catalogue shewing the species of plants cultivated in the Botanical Gardens, N. W. Provinces:

B. List shewing the names of applicants for plants and seeds, from 1st January 1846 to 31st December 1853, and the number of plants and parcels of seed distributed.

C. List shewing the species of hill seeds collected, and sent to the Hon'ble the Court of Directors, and other parties in Europe, in 1852 and 1853.

D. List shewing the number of tea plants and the quantity of tea seeds received from China through Mr. Fortune.

E. List shewing the number of tea plants and seeds distributed to private parties, &c.

F. List shewing the donations of plants and seeds received from the Hon'ble the Court of Directors.

G. List shewing the directions received from private individuals.

H. General Abstract.

I. Plan of the Garden, shewing the manner in which it is laid out.

2. By list B. it will be perceived that there is not a public garden in the N. W. Provinces from Benares to Peshawur, which has not been more or less benefited by plants and seeds from the Saharunpoor Garden. Amongst the most important institutions we may mention the public gardens at Agra, Cawnpoor, Lucknow, Delhi, Meerut, Bamouri, Stud Depôt, Canal Department, Umballah, Simla, Kangra, Jullunder, Lahore, Mooltan, Hazara, &c.

3. In the horticultural department large numbers of the finest kinds of fruit trees have been distributed, and to the Canal Department alone several thousands of grafted Bombay and Maldah mangoes, which have formed the basis of the now flourishing plantations on the Doab and Deyrah Dhoon Canals.

4. To Civil officers in charge of districts, large numbers of fruit and timber trees, flowering shrubs, and large supplies of agricultural and horticultural seeds have been given, both for distribution to their zemindars, and to form nurseries for the benefit of their charge.

5. To officers now engaged in carrying on the Grand Trunk to Peshawur, one of the mightiest works ever undertaken by a great Government, large quantities of timber seeds have been supplied to enable them to form nurseries for planting the road sides, and groves or topes at convenient distances, or halting places; this in a woodless country

like the Punjab is urgently required, and therefore too much attention cannot be directed to it. Nor is the planting and preservation of timber in the neighbourhood of the Hill military stations and sanatoria, such as Kussowlie, Dugshai, Subathoo, Simla, &c. less worthy of attention, seeing that the demand for wood for economical purposes is daily increasing, and thus the destruction of the virgin forests rapidly going on. If therefore this destruction be not now met with by some activity in planting, timber for building and other purposes will, in a comparatively few years, with difficulty be procured at the places mentioned.

6. The officers now engaged in forming canals in the Punjab, imitating the excellent example shown them by Colonel Cautley in the Doab Canals, are now engaged in forming timber tree nurseries, so as to enable them to plant their banks as soon as the works are sufficiently advanced as to render it advantageous for them to do so. To these individuals, headed by Colonel Napier, large supplies of timber seeds have been distributed.

7. To the Agricultural Society of the Punjab, an institution lately established, and which is destined ultimately to bring about great changes in the agriculture and horticulture of that part of the empire, large numbers of fruit and timber trees, flowering shrubs, agricultural and horticultural seeds have been supplied: the same institution acting on a suggestion made by me in my report on the Punjab, which I had the honor to submit with my letter No. 381, dated 6th October 1851, to Mr. Secretary Thornton's address, viz. that that country was well fitted for producing silk, have extensively introduced from the Saharunpoor Garden the *morus multicaulis*, and another kind of mulberry lately received at the Garden from one of the best silk districts in China, and where it covers immense tracts of country. Of these mulberries there are now many thousands growing luxuriantly in the Jullunder and Baree Doabs. Silk worms have also been introduced, and artificers have been ordered from Bengal to teach the natives how to wind the silk off the cocoons. In a few years therefore, we may expect to see the Punjab becoming an extensive silk-exporting country.

8. To the Soldiers' Gardens, admirable institutions which have been formed at many military stations, and which ought to be established

at every station where European troops are located, as a source of recreation and benefit to such men in the ranks as have been brought up to the spade or plough, and who are anxious to have an opportunity of employing their spare time usefully and advantageously, which might be otherwise spent in the canteen,—large supplies of seeds have been given, and to some of them numbers of fruit trees and flowering shrubs. Such kinds of gardens already exist at Umballah, Kussowlic, Dugshai, Ferrozepoor, Lahore, Wuzeerabad, &c.

9. Nor has the supply of fruit trees, timber trees, flowering shrubs, seeds, &c. to the public at large been less liberal, as is proved by the list B. which shews a total of 6,583 applicants, or on an average of 824 per annum.

10. To the Hon'ble the Court of Directors large supplies of seeds, as per list C., have been forwarded for distribution in Europe to public institutions and private individuals. The seeds sent this season, amounting to 331 species, are more varied than those of last year, with which the Hon'ble Court were pleased to intimate their satisfaction—and were collected in Chumba, Kooloo, Lahool, Simla, and Mussoorie districts, Gurhwal, Kumaon, Nepal, Darjeeling and Sikkim, and amongst them there was a large supply of the finer kinds of rhododendrons lately discovered by Dr. Hooker in Sikkim, and a new species of pine (*pinus Royliana*) discovered at an altitude of from 9 to 10,000 feet on Gossainthan, in Nepal. This species, distinguished by its fine dark foliage, and small adherent pendulous cones, armed with strong spines is well adapted to the open air in Britain, and will no doubt prove a great acquisition to the arboriculturists. Of dried specimens of plants a magnificent collection consisting of nearly 3,000 species, the duplicates of plants collected by me in my numerous journies in the Punjab, Hazara, Kangra, and Kooloo, Kumaon, Gurhwal, Tibet, the plains N. W. Provinces, &c. have also been forwarded.

11. For the public service the dried leaves and extract of *hyosciamus* have been annually prepared, and of a superior quality.

12. Her Majesty's Government having recommended that one or more of the Royal Forests be planted with Deodar trees, (the Cedar of

the Himalayas), last season lbs. 2,020 were forwarded to the Hon'ble the Court of Directors for the use of H. M.'s Commissioners of Woods and Forests, and this season lbs. 1,750 for the same purpose, all of which, by order of the Most Noble the Governor General, were dispatched by Dr. Falconer by the overland route. To have sent them by any other route would have ended in complete failure, as Deodar seeds, if kept for any length of time, will not germinate. I mention this fact in order that if more be required, they may be sent by the same route. To show to parties in Europe interested in the growth of the Himalayan Cedar, the kind and quality of the wood yielded by it, four enormous planks procured by me in the Kohistan of the Punjab, 18 feet long, 4½ feet broad, and 4 inches thick, have been forwarded to the India House in compliance with the orders of the Hon'ble Court.

13. As connected with the Gardens we shall only briefly notice the Tea plantations in the N. W. Provinces and Kohistan of the Punjab, (as they will form the subject of another communication), as the cultivation of the tea plant is destined ultimately to change the features of the Hill provinces, and render them as valuable to the State as those of the Plains. The tea plant is now thriving from Kangra to Kumaon, and has recently been introduced into Hazara; where I am confident it will also succeed, and in the adjoining valley of Cashmere. The finer kinds of tea plants recently introduced by Government through Mr. Fortune from the northern districts of China, viz. Woo-c-san, Hway-Chow, Moo-yuen, Tein-Tung, Silver Island, &c. have been distributed throughout the whole of the districts where tea is cultivated, and have flowered and yielded a large supply of seeds, from whence numbers of plants will be available in the ensuing season for distribution. For the cultivation of the tea plant on an extensive scale, the mountainous part of the N. W. Provinces and Kohistan of the Punjab possess immense advantages in having an unlimited quantity of land well adapted for the purpose, an immense supply of cheap labour, and boundless and easily accessible markets. The teas already prepared have been pronounced by the best authorities, the London brokers, to be of a very superior description, and equal to the finest China teas met with in the home markets; and the small quantity thrown into the Indian market has met with the approval of the public, as shewn by the increasing demand, a test of the highest value. There is therefore nothing to prevent the Kohistan

of the Punjab, and the mountainous district of the Agra Government, in a few years, from competing with China in this important article of commerce.

14. To encourage natives and private individuals to enter on tea cultivation on their own account, large supplies of seeds and plants have been distributed as detailed in list E.

15. To place the factories, of which there are now four in work, and plantations, on the most efficient footing, six Chinese tea manufacturers and two sheet lead makers have been imported by Government from one of the best tea districts in China, and large supplies of implements, seeds, and plants. Of the seeds however only 151 germinated, the germinating properties of the others having been destroyed in transit. Of plants, varieties both of green and black teas have been imported, the former from Hway-Chow, Moo-yuen, and Silver Island, and the latter from Tein-Tung and Song-Gan in the Woee district. That the green and black teas are distinct species cannot be admitted by any one who examines them in a plantation. Varieties they no doubt are, though it is difficult to assign permanent characters to each, there being no true line of demarcation. In the plantations, fifty or more varieties may be made out, all of which exhibit distinguishing characters, which however are not reproduced when their seeds are sown, shewing therefore that they are not sufficient to form specific distinctions, and that all are the effects of cultivation and locality. Moreover green and black teas are indiscriminately prepared from all the varieties. In preparing green teas the greatest care has been taken to prevent the use of any colouring matter, which the Chinese at first were most anxious to use, because they remarked, unless they did so the bloom or colour would not be so good as that of the China teas, and that thus they would be deteriorated in value. To their arguments, however, I would not listen, and at once prohibited all colouring matter, and the colour of the Indian green teas therefore is entirely produced by manipulation in cast-iron pans, heated to about 140° to 160° Faht. That adulteration of teas is carried on to a vast extent in China by exporters to Britain, I may quote as evidence Dr. Lindley's lecture on the results of the great British Exhibition of 1851:—"There is among Mr. Dakins' samples, another point "which is of a somewhat different nature. You will find there some

“very fine samples of gunpowder tea and of scented capir, the finest
 “the Chinese can make; and near them you will observe some spurious
 “gunpowder and spurious scented capir tea; the eye cannot perceive
 “a difference between them. Here we have an instance in which the
 “Chinese have succeeded in committing a fraud which is of a most gigan-
 “tic nature, as must be admitted when we recollect that lbs. 750,000
 “weight of such tea were imported into Liverpool a short time ago, and
 “that when the spurious article is mixed with real tea the two cannot be
 “distinguished by an ordinary process. One of these teas is black, and
 “exactly like scented capir, the other is green, and to the eye is exactly
 “like the finest gunpowder. But *there is no tea in either*, and they offer
 “a very curious instance of the ingenuity of the Chinese in falsifying
 “what they sell, an art for which that nation is notorious. This ‘Tea’
 “they call ‘lie tea’, and it is made in the following manner. The Chinese
 “take a tub into which they put a quantity of sand and similar substan-
 “ces, pounded leaves, vegetable dust, or any thing containing vegetable
 “matter, with apparently some gypsum; this they sprinkle with rice
 “water. The rice water being of a glutinous nature collects the com-
 “position into small balls, which hold together, and by degrees, by dex-
 “terous manipulation the tub, full of this fraudulent material, acquires
 “the form of myriads of globules. In the next place the globules are
 “faced; they are made black with black lead, as Mr. Warrington, attach-
 “ed to Apothecaries’ Hall, has proved by analysis. They face the green
 “with Prussian blue, and probably turmeric. There are two opinions
 “about that: some say the green is a mixture of Prussian blue and chro-
 “mate of lead; others say that turmeric is used, at all events there is
 “no tea, you will see by these test glasses that I have been taking pains
 “to get some tea out of the ‘lie tea’. There is a great deal of dirt,
 “and a great many pieces of leaves at the bottom, and that is all, but
 “there is not a trace of tea in the infusion, and I have employed nothing
 “that could have destroyed the tea leaves, if there had been any pre-
 “sent.”* Under the Chinese tea manufacturers a number of natives
 have been placed as assistants in order that they may learn all the pro-
 cess of manipulation, and thus enable us, ere long, to carry on the facto-
 ries by their aid alone. Table No. 5 shews the number of plants and
 quantity of seeds received from Mr. Fortune: as yet no further consign-
 ments have been received from him, but Dr. Falconer, in a demi-offi-

* Lectures on the Results of the Great Exhibition of 1851. On Substances used as Food, by Dr. Lindley, p. 244.

cial letter to my address, states that a large supply had reached Calcutta in good order.

16. In 1846 a single tuber or root of the *Exagonium purga*, which yields all the best jalap of commerce, was received from the Hon'ble the Court of Directors through Dr. Royle, and from it a large number of tubers have been raised at Mussoorie and Chijouri in the Himalayas, and in a few years the public service will be able to be supplied with this valuable drug. In Mexico, on the eastern declivity of the Andes, this plant is met with at an altitude of about 6,000 feet, and at altitudes varying from 4,000 to 6,500 in the Himalayas it grows luxuriantly, flowering in September.

17. For some time the public service was supplied with Senna leaves from the Garden, which were pronounced by competent authorities to be equal in their action to the finest Alexandrian senna. In the Agra and Muttra districts the plant is now extensively cultivated. This I brought to the notice of the Medical Board, and by their orders were issued to give the contract to supply the public service with picked senna leaves to the growers, which they readily took up and at a very low rate, (anas 4 per pound). It was not therefore necessary to continue any longer the cultivation on an extensive scale at Saharunpoor.

18. By the Hon'ble the Court of Directors, both seeds and sets of roots of hops have been supplied on several occasions, and been tried on the Himalayas at various altitudes from 3,500 to 6,000 feet : at 6,000 feet it grows luxuriantly, but does not flower. At Kaolagir in the Deyrah Dhoon it also grows well, but flowers sparingly, and that too during the rains, by which all the pollen is washed away, and thus the flowers rendered almost useless. In the valley of Hawalbaugh in Kumaon, altitude 4,500, it also grows most luxuriantly, and flowers freely in August, when the rains begin to lessen in force, and last season from a few hundred plants I collected about 2 lbs. of hops of fair quality. This altitude on the Himalayas therefore seems the best adapted to the plant; and as the flowers, as stated, are liable to be injured by the rains, I have transmitted to Mr. Macleod, Commissioner Trans Sutlej States, a number of sets in order that they may be forwarded to Lahool, where the rainy season is very partial, and there tried. Malt liquors are now ex-

tensively prepared in this country; the cultivation of this plant therefore on a large scale is well worthy the attention of those engaged in the trade, as in many localities in the Himalayas, at about 4,000 feet altitude, it might be successfully done, and thus reduce greatly the expense of preparation of malt liquors and bring them more within the reach of the soldiery and poorer classes, and lead in a measure to the reduction of the vile and pernicious spirituous liquors met with in every bazar.

19. From Dr. Royle of the India House, numerous parcels of cuttings of fruit trees, wrapped in caoutchouc cloth and cotton, have been received by the overland route, and thence forwarded by letter dawk from Bombay; and though many of them arrived in a tolerably fresh state few have succeeded; some of the freshest cuttings have been grafted on country stocks, with complete success. This plan of managing cuttings is, therefore, well worthy of a more extensive trial. Much more success has attended the experiment of packing grafted fruit trees in dry moss and then in a deal box. Four boxes of this kind, filled with valuable grafted fruit trees, have been received from the Hon'ble the Court of Directors, and the last which arrived in December contained no less than 75 per cent. of plants in good order. The plan is, therefore, well worthy of general adoption, as the weight of the box being small, it can always be forwarded by dawk banghy to any part of the country, for a small sum.

20. The various consignments of fruit trees received in Ward cases and boxes have stocked the gardens. Of fruit trees of kinds such as apples several varieties, pears, peaches, plums, apricots, cherries, gooseberries, currants, (red, black and white,) figs, filberts, &c. and of those that have fruited in the hills, as the Ribston, Hathornden Frances pippins, the fruits are in flavour equal to the best met with in Europe. From those plants a large number of grafts have been made, and are making, for distribution to applicants.

21. By the Supreme Government a consignment of fruit trees, which were brought to Calcutta in 1850, by an American vessel laden with ice, was purchased and forwarded to the N. W. Provinces; many of these plants are now in excellent condition, and from them

many grafts have been obtained and distributed. The plan adopted, to insure the arrival of the plants in good order, was a novel one, and well worthy of repetition. As the ship was about to leave America laden with ice, the plants were lifted, when the sap was in a torpid state, and packed in a box and buried in the ice. By so doing the young shoots were wrapt in this state until they reached their destination. On removing them from the ice in Calcutta the buds immediately commenced to burst, and when they reached Saharunpoor many of the plants had made shoots upwards of eight inches and a foot long.

22. Of timber trees and flowering shrubs a large number of new and interesting species have been added to the collection, propagated, and distributed to different institutions, and private individuals.

23. Of vegetable seeds large quantities have been raised from imported seeds and distributed. As all seeds in this country rapidly degenerate, it is absolutely necessary that a continual supply be received from Europe or America to enable us to distribute good seeds. This the Hon'ble the Court of Directors have liberally done, and continue to do, through Dr. Royle, as shewn in list No. F. appended.

24. Of cereals many fine kinds have been received from Europe through Dr. Royle, and extensively distributed. I may instance the American maize, which is now extensively cultivated throughout Kumaon, Gurhwal, and the western hills from seeds distributed by me. From the Bombay Government a very fine kind of jowar, the produce of Abyssinia, has been received, which promises to be a valuable acquisition to the lower Himalayas, and Kohistan of the Punjab.

25. Of cotton seeds several valuable kinds have been extensively distributed in the N. W. Provinces, and throughout the Punjab.

26. From the finest flax districts of Russia, a considerable supply of seeds have been received from Mr. A Forbes Field, and grown in the garden, and distributed to different parties in the N. W. Provinces and the Punjab. This plant, valuable both for its fibre and seeds, and which is found everywhere growing wild in the N. W. Provinces, is well worthy of more attention.

27. Of grasses the most useful introduced as a green crop is the Italian rye grass, which is now extensively cultivated in the Saharunpoor Stud farm, and growing with great luxuriance, affording during the cold weather six or eight cuttings. In the neighbourhood of large military stations, this plant might with great advantage be extensively introduced as a green crop, seeing that it yields heavy crops during the cold weather, or when grass is scarce, and is readily eaten by horses and cattle.

28. To the Herbarium vast additions have been made, by collections made during my various journies through the upper provinces, Himalayas, Tibet, and Punjab, and by presentations from private individuals. Amongst these I may mention Dr. T. Thomson, Dr. Falconer, Dr. Fischer of St. Petersburg, the late Dr. Griffith, Col. Dickey, Dr. Royle, Capt. Ramsay, Dr. Gibson, D. Macleod, Esq., Major Longden, Capt. Hay, Dr. Oldfield, Dr. Withecomb, &c., to all of whom I am under the greatest obligations; but particularly to Drs. Oldfield and Withecomb, by whom the seed collectors' operations in Nepal, Darjeeling and Sikkim have been directed. Part of the duplicates of these collections have been forwarded to the Hon'ble the Court of Directors, as stated, and the remainder will be transmitted in the ensuing season. A list of donations made by private individuals is given in Table G.; and Table H. is a general abstract.

29. In concluding this Report I beg to lay before the Hon'ble the Lieutenant Governor, a plan of the Garden, shewing the manner in which the different departments are arranged. For the use of the student a large collection of plants, consisting of upwards of 1,700 species, has been laid out according to their natural orders, and adjoining a collection of such plants as are used in the *Materia Medica*. These plants are also arranged according to the natural system, and numbered and named in conformity with the catalogue.

171	Roxburghia, Dryand, Endl. Gen. Plant. p. 157. R. veridiflora. CLASS IV. GYMNOGENS. <i>Ord. XXXIV. Cycadeaceæ, Land. Veg. King. p. 223.</i>	So named in honor of the late Dr. Roxburgh, Superintendent Botanical Garden, Calcutta, and author of several botanical works.
172	Cycas, Lin. Endl. Gen. Plant. p. 71. ..	From the Greek name of a Palm said to grow in Ethiopia, it is thus named.
○	C. revoluta... ..	From the pith of this plant, as well as the following, a kind of sago is prepared.
○	— cernalis.	
	<i>Ord. XXXV. Coniferæ,* Pinaceæ, Land. Veg. King. p. 226.</i> The Pine Tribe. Abietæ, L. V. K. p. 229.	So named from <i>pinos</i> , a pine tree, or from the Celtic <i>pin</i> or <i>pyn</i> , a rock, in reference to the habitat of the species.
173	Pinus, Lin. Endl. Gen. Plant. p. 260.	
○○	P. longifolia.	Cheer. Cheel. Surul. Sulla. Of this species there are two varieties in the Himalayas, one with twisted the other with straight fibres, and thus the former is styled kutcha, its wood only being fit for burning and the latter puka by the natives. The wood of the latter is admirably fitted for building purposes, but if exposed to the action of the weather and water, it is quickly destroyed. Lathing made of it is named dadur.
○○	— excelsa.	Kuel.
○○	— gerardiana.	Chilgoza. Neoza. Gunobur. Rhee. Newr. This species occurs in British Gurhwal near Bumpa, which appears to be its most southern habitat. Seeds edible, and exported from Cabul and Kunawur, in considerable quantity for sale.
○	— pinaster... ..	Ke-bar. Penaster or Cluster Pine.
○	— pinea.	Stone Pine.
○	— Royleana. †	Deodar of Nepal.

<i>Ord. XLV. Cannabinaceæ, Lind. Veg. King. p. 265.</i> <i>The Hemp Tribe.</i>		
201	<i>Cannabis</i> , Tournef, Endl. Gen. Plant. p. 286.	So named from the Arabic <i>Kinnub</i> , the <i>canape</i> of the middle ages, Dutch <i>kin-nup</i> and <i>kinup</i> , German, <i>kannf</i> , whence English <i>Hemp</i> .
○○	<i>C. sativa.</i> — <i>Himalensis.*</i>	Ghanga. Goon. Gunga. Phool Bhang. Bhang. Kenub. From the male plant fibres, ropes and hempen cloth or Bungela are manufactured, and from the female the gum [†] resin, Churru, is prepared. It is extensively cultivated in Gurhwal, and forms the principal article of clothing of the people in many districts, as Kunour, &c. in the Himalayas. [†]

* This does not differ from the former species farther than in size and in yielding Churru, which is also obtained from the wild plant in the Himalayas. The same species abounds in the plains but does not yield the gum resin Churru, nor is its fibre of any use. The stalks and leaves when broken up form the Bhang of the bazaars.

Its seeds will not germinate if kept more than a few days out of the ground, hence the reason why they have always failed to germinate when sown on the banks of the canals. The timber of this tree is the great staple article of exportation from the Deyrah Dhoon, for building purposes, the wood being close grained, hard and tough, and covers fully two-thirds of the forest land of that valley. It is also found to the westward in the Kohistan of the Punjab, in the Juswun Range and in the upper or Eastern portion of the Kangra Valley.
